Sri Lanka Standard
NANOTECHNOLOGIES - GENERATION OF METAL NANOPARTICLES FOR
INHALATION TOXICITY TESTING USING THE EVAPORATION/CONDENSATION
METHOD

NATIONAL FOREWORD

This standard was approved by the National Mirror Committee on Nanotechnology and authorized for adoption and publication as a Sri Lanka Standard by the Council of the Sri Lanka Standards Institution on 2013.11.27.

This Sri Lanka Standard is identical with **ISO 10801:2010**, Nanotechnologies - Generation of metal nanoparticles for inhalation toxicity testing using the evaporation/condensation method, published by the International Organization for Standardization (ISO).

TERMINOLOGY AND CONVENTIONS

The text of the International Standard has been accepted as suitable for publication, without any deviation as a Sri Lanka Standard. However, certain terminology and conventions are not identical with those used in Sri Lanka Standards. Attention is therefore drawn to the following:

- a) Wherever the words “International Standard” appear referring to this standard they should be interpreted as “Sri Lanka Standard”.
- b) The comma has been used throughout as a decimal marker. In Sri Lanka Standards, it is the current practice to use a full point on the baseline as the decimal marker.

Wherever page numbers are quoted, they are “ISO” page numbers.

CROSS REFERENCES

Corresponding Sri Lanka standards for International Standards listed under references in **ISO 10801:2010** are not available.

Foreword	iv
Introduction.....	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	3
4.1 Generation	3
4.2 Preparation of system	4
5 Requirements	4
5.1 Capacity and control	4
5.2 Nanoparticle properties	5
5.3 Exposure chamber atmosphere	5
5.4 System operational safety	5
6 Characterization of generator performance	6
6.1 Requirements for particle size distribution and mass concentration	6
6.2 Particle size distribution measurement	6
6.2.1 Sampling with DMAS	6
6.2.2 Sampling for microscopy	6
6.3 Mass concentration measured by filter sampling	6
6.3.1 Filter sampling for aerosol mass concentration	7
6.3.2 Frequency of sampling	7
7 Nanoparticle generation specifications	7
7.1 Test particle purity/impurities	7
7.2 Size range	7
7.3 Number concentration	7
7.4 Nanoparticle shape	7
7.5 Stability	7
7.6 Animal exposure	8
8 Assessment of results	8
9 Test report	8
Annex A (informative) Example method for evaporation/condensation generation of silver nanoparticles	9
Bibliography	21

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 10801 was prepared by Technical Committee ISO/TC 229, *Nanotechnologies*.
