Sri Lanka Standard
SPECIFICATION FOR MOSQUITO NETS

FOREWORD

This standard was finalised by the Sectoral Committee on Textiles, Clothing and Leather, and was authorised for adoption and publication as a Sri Lanka Standard by the Council of the Sri Lanka Standards Institution on 1995-07-20.

Mosquito nets which are available in the market can be categorised into three types namely single bed, double bed and twin bed. In determining the quality of this widely used customer item more emphasis should be given not only to netting but also stitching and other attachments. In that case shape, size and dimensions of mosquito nets are very important. This standard which outlines requirements for manufacture and workmanship of mosquito nets will be a guidance for the buyer and will help consumer protection.

For the purpose of deciding whether a particular requirement of this specification is complied with, the final value, observed or calculated, expressing the result of a test or an analysis, shall be rounded off in accordance with CS 102. The number of significant places retained in the rounded off value shall be the same as that of the specified value in this specification.

Guidelines for the determination of a compliance of a lot with the requirements of this standard based on statistical sampling and inspection are given in Appendix A.

In the preparation of this standard, the valuable assistance derived from the following publication is gratefully acknowledged:

IS 9386 : 1981 Indian Standard Specification for mosquito nets.

1 SCOPE

This specification prescribes the requirements for mosquito nets.
