**Sri Lanka Standard**  
**SPECIFICATION FOR SHEETING FOR GENERAL PURPOSES**

**FOREWORD**

This standard was approved by the Sectoral Committee on Textiles, Clothing and Leather and was authorised for adoption and publication as a Sri Lanka Standard by the Council of Sri Lanka Standards Institution on 1995-07-20.

This standard covers the constructional details and performance requirements of sheeting produced from cotton or polyester cotton blends and intended to be used for the purpose of clothing, covering, sheeting or other similar supporting activities. These sheetings are suitable to be used for above purposes by any institution in connection with the hospitality industry such as hospitals, hotels etc. These sheetings are also suitable for household use. As these fabrics, specially cotton sheetings are treated with scouring and/or bleaching processes, it is meant that these fabrics are free of starch and sufficiently resistant to rot and mildew.

Guidelines for the determination of a compliance of a lot with the requirements of this standard based on statistical sampling and inspection are given in Appendix A.

For the purpose of deciding whether a particular requirement of this specification is complied with, the final value, observed or calculated, expressing the result of a test or an analysis shall be rounded off in accordance with CS 102. The number of significant places retained in the rounded off value shall be the same as that of the specified value in this specification.

In the preparation of this standard, the assistance derived from the publications of Bureau of Indian Standards is gratefully acknowledged.

**1 SCOPE**

This standard prescribes the methods of sampling and tests for woven sheeting materials used for the purpose of clothing, covering, sheeting or any similar activity.
